

What is ANZDATA?

A long time ago...
People who look after kids
with kidney disease got
together as a team.

Each year a special
person in your hospital
team tells ANZDATA
about your medicines
and operations.

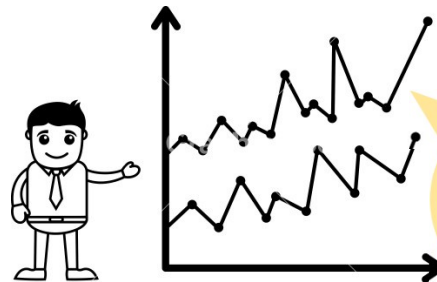

They called this big
team ANZDATA.
ANZDATA lives at a
hospital in Australia.

These bits of information
about all kidney kids in
New Zealand are joined
together in a computer.

ANZDATA helps your
hospital team look
after kidney kids
better.

ANZDATA people use
this information to
answer questions, like
“Which medicines work
the best?”
