## Quality Indicators

**First Half of Year Report**

**01 January 2025 - 30 June 2025**

## Real-Time Database

PUBLISHED 25 August 2025

The release of the Quality Indicator report is now an ANZDATA/ANZSN co-badged report. This information is provided as it is reported to ANZDATA. The reporting arrangements provide additional information to units on quality indicators. Units should use these data to monitor clinical practice and outcomes.

### **Note on Reports from the Real-Time Database**

This report has been generated from the “real-time” database, as contributed by units at the date of publication. Results are dependent on the timeliness and completeness of data submission by units. We try to provide indices to allow evaluation of the completeness both overall and for individual hospitals. However, results are preliminary and subject to change. The subsequent report from the Analysis database, following the end of year survey, will provide the final results for this observation period.

# 1 Incidence of Peritonitis in Patients Treated with Peritoneal Dialysis

## 1.1 Adult

This table presents the total number of peritonitis episodes and patient exposure in years by Centre. Patient totals, exposure and peritonitis episodes were determined using the hospital at which the patient was receiving treatment at the time. So, if a patient transferred units during the observation period, the subsequent exposure and peritonitis episodes were allocated to the new unit. Months per episode (PM per Episode) is also reported. This should be interpreted as the average number of months between episodes of peritonitis; it can not be calculated if the peritonitis rate is zero. The half-yearly average number of 2024 episodes are based on the 2024 analysis database and are provided to allow assessment of possible under-reporting. This is a particular issue with peritonitis reporting. Patients are excluded from this adult report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in this adult report. Any patients 18 years and older treated at a paediatric hospital are excluded from this report. This quality indicator is presented for Australia only as New Zealand peritonitis episode data is reported through the New Zealand Peritoneal Dialysis Registry. Note that the 2022 International Society for Peritoneal Dialysis peritonitis guideline has a target that the overall peritonitis rate should be no more than 0.40 episodes per year at risk.

PD Peritonitis Rate, Adults  
01 January 2025 - 30 June 2025

PD Peritonitis Rate, Adults  
By Jurisdiction, 01 January 2025 - 30 June 2025

## 1.2 Paediatric

This table presents the total number of peritonitis episodes and patient exposure in years by Centre. Patient totals, exposure and peritonitis episodes were determined using the hospital at which the patient was receiving treatment at the time. So, if a patient transferred units during the observation period, the subsequent exposure and peritonitis episodes were allocated to the new unit. Months per episode (PM per Episode) is also reported. This should be interpreted as the average number of months between episodes of peritonitis; it can not be calculated if the peritonitis rate is zero. The half-yearly average number of 2024 episodes are based on the 2024 analysis database and are provided to allow assessment of possible under-reporting. This is a particular issue with peritonitis reporting. Patients are included in this paediatric report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in the adult report. Any patients 18 years and older treated at a paediatric hospital are included in this report. Note that the 2022 International Society for Peritoneal Dialysis peritonitis guideline has a target that the overall peritonitis rate should be no more than 0.40 episodes per year at risk.

## 2 Dialysis Access Planning at Commencement of Dialysis

### 2.1 All Dialysis Access Planning

#### 2.1.1 Adult

This table presents the numbers of patients beginning haemodialysis or peritoneal dialysis and the percentage starting with a permanent access (an AVF or AVG for haemodialysis and all peritoneal dialysis patients) during the observation window by Centre, where dialysis was the first kidney replacement therapy. Patients are excluded from this adult report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in this adult report. Any patients 18 years and older treated at a paediatric hospital are excluded from this report. Some Centres did not report type of first access for all new HD patients. The percent beginning with a permanent access is based on the number of patients with data available for first access. The half-yearly average number of new dialysis patients for 2024 from the analysis database is also provided to allow assessment of possible under-reporting. Finally, the total of Early Referrals (patients seen more than 3 months before first treatment) and the percentage of Early Referrals with a permanent access are also presented.

**2.1.2 Paediatric**

This table presents the numbers of patients beginning haemodialysis or peritoneal dialysis and the percentage starting with a permanent access (an AVF or AVG for haemodialysis and all peritoneal dialysis patients) during the observation window by Centre, where dialysis was the first kidney replacement therapy. Patients are included in this paediatric report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in the adult report. Any patients 18 years and older treated at a paediatric hospital are included in this report. The half-yearly average number of new dialysis patients for 2024 from the analysis database is also provided to allow assessment of possible under-reporting. Finally, the total of Early Referrals (patients seen more than 3 months before first treatment) and the percentage of Early Referrals with a permanent access are also presented.

## 2.2 Vascular Access at First Haemodialysis

### 2.2.1 Adult

This table presents the numbers of patients beginning haemodialysis and the percentage starting with an AVF or AVG during the observation window by Centre, where HD was the first kidney replacement therapy. Patients are excluded from this adult report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in this adult report. Any patients 18 years and older treated at a paediatric hospital are excluded from this report. Some Centres did not report type of first access for all new HD patients. The percent beginning with AVF or AVG is based on the number of patients with data available for first access. The half-yearly average number of new HD patients for 2024 from the analysis database is also provided to allow assessment of possible under-reporting. Finally, the total of Early Referrals (patients seen more than 3 months before first treatment) and the percentage of Early Referrals with AVF or AVG are also presented.

01 January 2025 - 30 June 2025

Vascular access at first HD (AVF/AVG)  
% of all HD starts, Adults

By Jurisdiction, 01 January 2025 - 30 June 2025

**2.2.2 Paediatric**

This table presents the numbers of patients beginning haemodialysis and the percentage starting with an AVF or AVG during the observation window by Centre, where HD was the first kidney replacement therapy. Patients are included in this paediatric report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in the adult report. Any patients 18 years and older treated at a paediatric hospital are included in this report. The half-yearly average number of new HD patients for 2024 from the analysis database is also provided to allow assessment of possible under-reporting. Finally, the total of Early Referrals (patients seen more than 3 months before first treatment) and the percentage of Early Referrals with AVF or AVG are also presented.

## 2.3 HD Vascular Access Planning

### 2.3.1 Adult

This table presents the numbers of patients on haemodialysis at day 90 and the percentage starting haemodialysis with a permanent vascular access (an AVF or AVG) during the observation window by Centre. Modality changes of less than 30 days are ignored for the determination of modality at day 90. Patients are excluded from this adult report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in this adult report. Any patients 18 years and older treated at a paediatric hospital are excluded from this report. Some Centres did not report type of first access for all new HD patients. The percent beginning with a permanent access is based on the number of patients with data available for first access. The half-yearly average number of HD patients at day 90 for 2024 is also provided to allow assessment of possible under-reporting. Finally, the total of Early Referrals (patients seen more than 3 months before first treatment) and the percentage of Early Referrals with a permanent access are also presented.

## 2.4 PD Catheter Planning

### 2.4.1 Adult

This table presents the numbers of patients on peritoneal dialysis at day 90 and the percentage starting kidney replacement therapy (KRT) with peritoneal dialysis during the observation window by Centre. Modality changes of less than 30 days are ignored for the determination of modality at day 90. Patients are excluded from this adult report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in this adult report. Any patients 18 years and older treated at a paediatric hospital are excluded from this report. The half-yearly average number of PD patients at day 90 for 2024 is also provided to allow assessment of possible under-reporting. Finally, the total of Early Referrals (patients seen more than 3 months before first treatment) and the percentage of Early Referrals starting with PD are also presented.

Centre	90-day PD Patients	Started KRT with PD	Did not start KRT with PD	Half-yearly Average of 2024 90-day PD Patients	% starting with PD (95 % CI)	Early Referral	% of Early Referrals starting with PD

### 3 Transplantation Wait Listing

#### 3.1 Adult

This table presents the numbers of patients aged <65 years who have received kidney replacement therapy (KRT) for 6 months, and the percentage who are transplanted or on the wait list within 6 months of KRT start during the observation window by Centre. The 6 month follow-up time means these patients commenced KRT between Jul 2024 and Dec 2024. The number of patients aged <65 years commencing KRT between Jul 2024 and Dec 2024 is also provided from the analysis dataset to allow assessment of possible under-reporting. Patients are excluded from this adult report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in this adult report. Any patients 18 years and older treated at a paediatric hospital are excluded from this report. This quality indicator is presented for Australia only as New Zealand transplant wait listing data is not currently available to ANZDATA.

#### 4 ANZDATA annual data survey timeliness

This figure shows the cumulative percentage of renal units that returned their annual ANZDATA survey each month following 31 December 2024. The date of survey return is the date ANZDATA received notification that annual data submission and data validations have been addressed for data lock. This survey return date identifies a Renal Unit is complete for quality indicator reporting.

This table presents the month of annual ANZDATA survey return by each renal unit following 31 December 2024.

Centre	Month of return

## 5 Kidney Replacement Therapy (KRT) Modality

### 5.1 Incident Modality

#### 5.1.1 Adult

This table presents the numbers (N) of incident kidney replacement therapy (KRT) patients during the observation window by modality at commencement and centre. Modality is categorised as pre-emptive kidney transplant (TX), peritoneal dialysis (PD), home haemodialysis (including commencing training) and community house haemodialysis (HHD\*) and facility haemodialysis (FacHD). Also presented are the percentages (%) of each modality out of the total incident KRT cohort. The half-yearly average number of incident patients for 2024 from the analysis database is also provided to allow assessment of possible under-reporting. Patients are excluded from this adult report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in this adult report. Any patients 18 years and older treated at a paediatric hospital are excluded from this report.

### 5.1.2 Paediatric

This table presents the numbers (N) of incident kidney replacement therapy (KRT) patients during the observation window by modality at commencement and centre. Modality is categorised as pre-emptive kidney transplant (TX), peritoneal dialysis (PD), home haemodialysis (including commencing training) and community house haemodialysis (HHD\*) and facility haemodialysis (FacHD). Also presented are the percentages (%) of each modality out of the total incident KRT cohort. The half-yearly average number of incident patients for 2024 from the analysis database is also provided to allow assessment of possible under-reporting. Patients are included in this paediatric report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in the adult report. Any patients 18 years and older treated at a paediatric hospital are included in this report.

## 5.2 Prevalent Modality

### 5.2.1 Adult

This table presents the numbers (N) of prevalent kidney replacement therapy (KRT) patients at the end of the observation window by modality and centre. Modality is categorised as functioning kidney transplant (TX), peritoneal dialysis (PD), hybrid peritoneal dialysis and haemodialysis (Hybrid), home haemodialysis including community house haemodialysis (HHD\*) and facility haemodialysis (FacHD). Also presented are the percentages (%) of each modality out of the total prevalent KRT cohort. The number of prevalent patients for 31 Dec 2024 from the analysis database is also provided to allow assessment of possible under-reporting. Patients are excluded from this adult report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in this adult report. Any patients 18 years and older treated at a paediatric hospital are excluded from this report.

### 5.2.2 Paediatric

This table presents the numbers (N) of prevalent kidney replacement therapy (KRT) patients at the end of the observation window by modality and centre. Modality is categorised as functioning kidney transplant (TX), peritoneal dialysis (PD), hybrid peritoneal dialysis and haemodialysis (Hybrid), home haemodialysis including community house haemodialysis (HHD\*) and facility haemodialysis (FacHD). Also presented are the percentages (%) of each modality out of the total prevalent KRT cohort. The number of prevalent patients for 31 Dec 2024 from the analysis database is also provided to allow assessment of possible under-reporting. Patients are included in this paediatric report if they were treated at a paediatric hospital. In rare cases when patients younger than 18 years are treated at an adult centre, they are included in the adult report. Any patients 18 years and older treated at a paediatric hospital are included in this report.
