Explanatory notes

Definitions

- 1 Actual Deceased Organ Donor – A person for whom the organ retrieval procedure commenced in the operating room (with surgical incision) for the purpose of transplantation. This includes donors who may have been deemed medically unsuitable during surgery or after the removal of organs.^{1,2,3,4}
- 2 Donation after Circulatory Death (DCD) – Donation, for the purpose of transplantation, occurs following death of a person resulting from the irreversible cessation of circulatory and respiratory function.⁴
- 3 Intended Deceased Organ Donor – A person for whom the donation workup was initiated as evidenced by both:
 - Formal written consent undertaken, including consent for donation of specific organs and/or tissues, and
 - Blood for tissue typing sent with allocation of a donor ID;
 but donation did not proceed.⁵
- 4 Multiorgan Donor – An actual deceased organ donor from whom at least two different types of organs have been retrieved for the purpose of transplantation.⁴
- 5 Recipient – An individual into whom allogeneic human cells, tissues or organs were transplanted.⁴
- 6 Recipient of Multiple Organs – A transplant recipient where two or more different types of organs have been utilised for transplantation in the same operative procedure. This excludes double adult kidney, en bloc kidney and double lung transplants. A single recipient can receive multiple organs in a single transplantation event.
- 7 Retrieval – The procedure of removing organs or tissues from donor.⁴
- 8 Transplantation – The transfer of organs and/or tissue from donor to recipient with the aim of restoring body function(s) of the recipient.⁴
- 9 Counts pertain to solid organs only (Kidney, Liver, Heart, Lung, Pancreas and Stomach Intestines). Pancreatic Islets are reported as “tissue”.

Notes

This report supersedes previous monthly reports and as data reported is subject to revision it may change in subsequent reporting.

All donation and transplantation data is presented by the state or territory of donation

Victorian activity includes those donors from Albury, NSW due to the proximity of Albury to DonateLife services in Victoria.

Method

To assist with transparency of reporting, the counting method is detailed below.

In Australia, data is collected via the Electronic Donor Record (EDR) and is then submitted to the online ANZOD Registry application via an XML for data validation and analysis.

Monthly data presents the number of Actual and Intended organ donors (as per definitions 1 and 3 on page 2) for a calendar month.

The count of transplant recipients identifies the number of individuals who fall under definition 5 (page 2) for the reporting period.

The count of organs transplanted identifies the number of individual organs, regardless of the type of transplant performed.^{6,7,8} Therefore, for reporting the number of organs transplanted, double lungs and double adult/en bloc kidneys have an organ count of two. A liver split into two segments and each transplanted into two recipients is counted as one organ transplanted.

In comparison, reporting of transplantation of organs represents the number of transplant procedures where one or more organs are transplanted during a single event.^{9,10,11} For reporting of double lungs and double adult/en bloc kidneys the transplantation count is one.
